Aavid's Ultrastick is a unique phase-change thermal interface material that surpasses grease in thermal performance and long-term stability. This solid, silicone free, paraffin based thermal compound changes phase at 60°C, with a concurrent volumetric expansion that fills gaps between the mating surfaces. One-cost effective application leaves a thin, film like deposit, providing excellent heat transfer and low interface thermal resistance.

Features:

- Thermal resistance 20% lower than thermal grease, with significant long-term reliability benefits
- Excellent heat transfer properties, consistent at mounting pressures from less than 5 psi to more than 200 psi
- No run-out, migration, dry-out, or flaking that can occur with typical thermal grease
- Non-toxic and inert
- Electrically nonconductive
- Easy to use and dry to the touch after application, reducing labor costs
- Each bar covers approximately 1,000 in²

hotovoltaic olators

The PhotoVoltaic isolator (PVI) generates an electrically isolated DC voltage upon receipt of a DC input signal. The PVI is ideally suited for driving power MOSFETs, IGBTs or sensitive gate SCRs to form solid state relays.

B

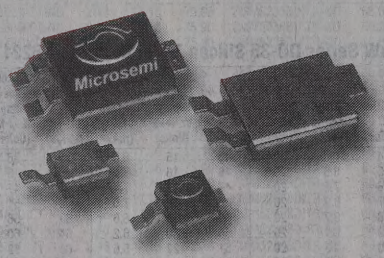
Powermite Package

1/3 the Size of SMA!



Microsemi's Powermite Product Division is a world leader in providing high density discrete solutions.
This patented technology provides size retrained designed with more options.

Features:

Built in Heatsink

- The patented "full-metal-bottom" design provides the optimal heat path for dissipating junction heat handling up to 2 Amps!

Solder Wickability

- The patented interlocking construction incorporates a path for solder to "wick" up the side of the package and enhance the power dissipation

Space Saver

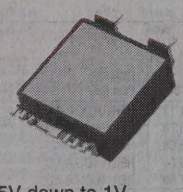
- These 2 leaded devices are 1/3 the size of comparable rated devices

Flexible Package for Custom Product (Max. die size 110mm x 110mm)

- Microsemi offers Schottkys, Ultrafast Rectifiers, MOSFETs, SCR's and Schottky+FET combinations

Synchronous Rectifier Module (SRM4010)

Is a complete solution for implementing a very high efficiency Synchronous Rectification and eliminates many of the problems with self driven approaches.



Features:

- Rectification Efficiency 95% at output voltages of 5V down to 1V
- Able to handle large sudden changes in duty cycle
- Robust package with copper plate for excellent heat dissipation
- Operates at PWM frequencies ranging from 200-400KHz

TVS Devices

Microsemi has the largest offering of TVS devices: 12,000 device These devices are perfect to safeguard your components from volta spike originating from electrostatic discharge (ESD), induced lightni and inductive load switching.

Just Pick Two:

All you need to know is 2 of the following 3 specs to find the part y need!

Vwm - Standoff Voltage:

Maximum working voltage at which the device is intended to operate. *Typical 3V, 5V, 12V, 15V, 24V. VWM is 10% below VBR.*

Vbr - Breakdown Voltage:

Voltage at which device goes into hard conduction or *avalanche* breakdown.

Vc - Clamping Voltage:

Maximum voltage appearing across TVS at Peak Pulse Current (IPP). *VC is typically 20% higher than VBR.*

High Speed Data Line Protectors

Provide voltage Spike Protection for Data and Telecom, I/O Ports originating from ESD, EFT and Induces Lightning

USB6B1	**500W, 8/20 us**
SMP6LCxx	**600W, 10/100 us**

USB Protection: 3 in 1

USB Line Termination + EMI Filtering + ESD Protection =

LX7201: Downstream SOT-23-6
LX7202: Upstream SOT-23-6
LX7203: Upstream SC70

The LX7201/2/3 family is an integrated USB line termination device w EMI filtering and ESD protection diodes. The 15kΩ pull-down resist on the LX7201 identify the lines for downstream operation. The 1.5 pull-up resistors on the LX7202 and LX7203 identify the appropri data line for full and low speed upstream operation. The 47pF capac completes the high frequency filter and controls the edge rate of USB signals. These devices protect both D+ and D- data lines and voltage bus from ESD. All devices meet IEC61000-4-2, level 4, 15 (air discharge) and 8kV (contract discharge). The LX7201, LX7202 a LX7203 are ideal for use in USB hubs, peripherals and portal appliances.

SG8002 Programmable Oscillators

The SG-8002 Series gives you the flexibility to solve many different application problems with a one time programmable device. Programmable Oscillators provide the ability to pick a custom frequency in one of five different packages available in SMD and Thru-Hole styles. These five packages are pin compatible with the Epson SG-615, SG-636, SG-51, SG-531 and SG-710 Oscillators. Frequency ranges are available from 1Mhz to 125Mhz, in ±100ppm and ±50ppm frequency stability options and 3.3 or 5V power supply levels.

Through-Hole Quartz Crystals

Series resonance appears resistive in the circuit and impedance at fs is at its minimum value. Unless load capacitance is specified, all crystals are manufactured at series resonance. When a crystal is operating at parallel resonance (fL) it will look inductive in a circuit. Crystal frequency varies depending on the value of load capacitance. The load capacitance is the dynamic capacitance of the total circuit as measured or computed across the crystal terminals. Always specify the load capacitance if the crystal will be operated in the parallel mode.

TOKO Ceramic Resonators - SMD

TOKO ceramic resonators utilize the piezoelectric principle converting a mechanical force (stress) into an electrical signal or converting an electrical signal into a mechanical force. The ceramic resonator is a thin section of piezoelectric ceramic material, such as quartz, whose sides are metallized into a corresponding pair of electrodes and upon the application of current produce a lengthwise vibration.

Common Mode Choke Coils Wound Type, Film Type and Film Type Arrays

DLW21H Series: Excellent noise suppression for limited board space applications. Suitable for differential signal line like USB2.0, IEEE1394 and LVDS. DLW21H does not provide distortion to high speed signal transmission due to its high coupling. (USB2.0:DLW21HN900SQ2). These parts are lead free.

DLW31S Series: High common mode impedance at high frequency provides excellent noise suppression performance. DLW31S series enables noise suppression for differential signal line without distortion in high speed signal transmission due to its high coupling. Lead is not contained in the product. Small dimension enables higher density mounting.

DLW5BS Series: High performance wound type chip common mode choke coil. Its high impedance characteristic enables great noise suppression, but it does not damage high speed signal due to low nom mode impedance.

DLP31S Series: Has excellent performance at high frequency range. Suitable for differential signal line USB, because DLP31S does not provide distortion to high speed signal transmission due to its high coupl (coupling coefficient: 0.98 min.)

DLP31D Series: Utilizing ferrite materials and thin film technology, this common mode choke coil array high impedance characteristics all packaged in a small case size. 2 components are included in 3.2 x 1.6m DLP31D can suppress common mode noise without damage to signal wave.

EMI Suppression Ferrite Chips and Arrays

15 Series: The BLM series comprises the A series for standard, and the B series for high speed signal. are lead free. The BLM-A series generates an impedance from the relatively low frequencies. The BLM- ies is effective in noise suppression in the wide frequency range (30MHz – several hundred MHz). The B series can minimize attenuation of the signal waveform due to its sharp impedance characteristics. ous impedances are available to match signal frequency. The BLM-B series has sharp impedance acteristics.

18 Series: The chip ferrite bead BLM18H series comprises ferrite bead inductors in the shape of a chip. inductor generates a high impedance which at high frequencies mainly consists of a resistance element. BLM18H series is effective in circuits without stable ground lines because the BLM18H series does not need a connection to ground. The BLM18HG, BLM18HD series has a modified internal electrode structure, that minimizes stray capacitance and increases the effective frequency range. The BLM_H series can provide higher levels of impedance well into the GHz range. The BLM18HG is intended for standard signal lines as this series provides significant impedance across a broad frequency range. The BLM18HD provides a sharper roll-off after the cut off frequency. This series is ideal for high speed signal lines.

BLM31 and BLM41 Series: Series can be used in high current circuits due to its low DC resistance. It can match power lines to a maxium of 6A DC (BLM41P).

BLA31 Series: The BLA31A/B is capable of filtering 4 circuits in a 3216 package size. BLA31A/B is suitable for EMI suppression in smaller digital equipment.

LC Combined Chip EMIFIL

NFL18ST Series: The NFL18ST series is an EMI suppression filter for high seed signal lines, achieving T-type structure in 1.6 x 0.8mm size with Murata's multilayer technology. Noise suppression for video signal lines (RGB lines) and high speed clock lines.

NFL21S Series: Murata's original internal structure design enables excellent noise suppression up to high frequencies. Available in five different values of cut off frequency ranging from 20MHz up to 500MHz.

NFW31S Series: The signal line chip EMI filter NFW31S series consists of high performance suppression filters LC combined wound type. They are designed for noise suppression in high speed digital circuits in which the signal harmonics are prone to becoming noise sources. These filters achieve 100dB/dec. (typ.) damping characteristic with Murata's innovative circuit design. This makes these effective in applications where the signal and noise frequencies are close to each other.

Panasonic® Z Series Miniature Aluminum Electrolytic Capacitors

±20%, Low Leakage, Low Impedance

SPECIFICATIONS:

Operating Temperature: -40°C to +85°C • **Rated Working Voltage:** 6.3 to 100VDC • **Rated Capacitance:** 0.1 to 2200µF • **Capacitance Tolerance:** ±20% • **Leakage Current:** I = 0.002CV + 1 (mA) max.; Where, I: DC leakage current (µA) C: rated capacitance (µF), V: DC rated working voltage (V). Leakage current is measured after 2-minute application of the rated DC working voltage. • **Surge Voltage:** The listed surge voltage is applied to the capacitor in series with 1,000 ohms resistor at a cycle of 0.5 minute "ON" and 4.5 minute "OFF" repeating 1,000 times at 25°C ±10°C. After the test, the capacitor should meet the following limits:

Working Voltage	Surge Voltage
10 V DC	13 V DC

Capacitance change	Within ±10% of the initial measured value
tan ∂	Less than 150% of the initial specified value
DC leakage current	Less than the initial specified value

• **tan ∂. (Dissipation Factor) Max.**

Working Voltage	tan ∂	D.F.
10V DC	0.17	17

0.06 for 1µF or less.

• **Low Temperature Stability:** Maximum impedance ratio against +20°C at 120Hz

Working Voltage	-25°C to +20°C	-40°C to +20°C
10V	2	4

• **Lead Life:** After 2,000 hour application of DC working voltage at +85°C with specified RMS ripple current, the measurements should meet the following requirements:

Capacitance change	Within ±20% of the initial measured value
tan ∂	Less than 200% of the initial specified value
DC leakage current	Less than the initial specified value

TPS Series Low ESR Surface Mount Tantalum Capacitors

TPS surface mount products have inherently low ESR (equivalent series resistance) and are capable of higher ripple current handling, producing lower ripple voltages, less power and heat dissipation than standard product for the most efficient use of circuit power.

TPS has been designed, manufactured, and pre-conditioned for optimum performance in typical power supply applications.

OxiCap™ Niobium Oxide Capacitors

Cost versus performance is a key requirement for consumer electronic products. A solid electrolyte capacitor OxiCap has been developed by AVX in standard EIA case sizes in order to meet this requirement as a higher performance alternative to aluminum and other SMT capacitor technologies currently on the market. The OxiCap non-burn technology is based on NbO niobium oxide ceramic material as the anodic material processed through the same manufacturing process as tantalum capacitors. The laser coded orange molded body gives total traceability.

Tantalum Dipped / Radial Capacitors

T350 and T356 "UltraDip II" Series

KEMET "UltraDip II" Series, miniature dipped solid tantalum citors, provide the designer with the advantage of compactness low leakage and low DF performance characteristics for filtering, ssing, coupling, blocking and RC timing circuits.

plastic case provides a tough barrier coating and maintains sion of lead wire spacing within ±0.015 inch.

ase sizes are printed with capacitance, voltage, polarity and or identification, these self-insulating cases are resistant to shock vibration.

The gold color epoxy permits Laser marking with outstanding permanency and legibility.

Solid tantalum devices exhibit no degradation failure mode during shelf storage.

These capacitors exhibit low DCL, ESR and Impedance and have excellent temperature stability. *The ESR values provided are for reference only.*

Capacitance Tolerance (%): ±10 **Operating Temperature:** -55° to 85°C (125°C with voltage derating)

KEMET Surface Mount Tantalum Chip Capacitors

KEMET's family of solid tantalum chip capacitors are designed and manufactured with the requirements of surface mount technology in mind. These devices extend the advantages of solid tantalum technology to today's surface mount circuit applications.

Operating Temperature Range: -55°C to 125°C

T491 Series — Industrial

The leading choice in surface mount designs. This product meets or exceeds the requirements of EIA standard 535BAAC. The physical outline and dimensions of this series conform to this global standard.

This product was designed specifically for highly automated surface mount processes and equipment.

T494 Series — Low ESR, Industrial Grade

The T494 is a low ESR series that is available in all the same case sizes and CV ratings as the T491 Se
The T494 offers low ESR performance with the economy of an industrial grade device. This series is targ
for output filtering.

T495 Series — Low ESR, Surge Robust

Designed primarily for output filtering in switch-mode power supplies and DC-to-DC converters. The stan
CV T495 values are an excellent choice for battery-to-ground input filter applications.

This series offers several important advantages: Very low ESR, high ripple current capability, exce
capacitance stability and improved ability to withstand high inrush currents.

NEW! Medium Power Film Capacitors

The FFB and FFV3 series use a non-impregnated metallized polypropylene or polyester dielectric with the controlled self-healing process, specially treated to have a very high dielectric strength in operating conditions up to 105°C. They have been designed for printed circuit board mounting. Furthermore, their performance allows them to be an alternative to electrolytic technology because they can withstand much higher levels of surge voltage. One unique feature of this technology (as opposed to electrolytics) is how the capacitor reacts at the end of its lifetime. With an electrolytic, there is a strong risk of explosion of the case. However, with this line of film capacitors, the capacitor will simply experience a loss of capacitance of about 2% at the end of its life. Please note that this is a theoretical, however, as the capacitor continues to be functional even after this 2% decrease. **Applications:** The FFB and FFV3 series are particularly designed for DC filtering, low reactive power. **General Characteristics:** • Climactic Category: 40/105/56 IEC 68 (FFV3 Series) 55/105/56 IEC 68 (FFB) • Test Voltage between terminals at 25°C is 1.5 X Vndc

KEMET Ceramic Conformally Coated Axial Leaded Capacitors "AXIMAX"

The "Aximax" series of multi-layer ceramic capacitors starts with a capacitor element that consists of formulated dielectric materials which have been cast into thin layers, interspersed with metal electrodes alternately exposed on opposite edges of the laminated structure. The entire structure is fired at high temperature to produce a monolithic block, which provides high capacitance values in a small physical volume. After firing, conductive terminations are applied to opposite ends of the chip to make contact with the exposed electrodes.

KEMET leaded ceramic capacitors are offered in the three most popular temperature characteristics: **C0G:** Class 1, with a temperature coefficient of 0 ± 30ppm per degree C over an operating temperature range of -55°C to +125°C (Also known as "NP0"). **X7R:** Class II, with a maximum capacitance change of ±15% over an operating temperature range of -55°C to +125°C. **Z5U:** Class III, with a maximum capacitance change of +22% - 56% over an operating temperature range of +10°C to +85°C.

KEMET Ceramic Conformally Coated Radial Leaded Capacitors "GOLDEN MAX"

e "Golden Max" series of multi-layer ceramic capacitors starts with a acitor element that consists of formulated dielectric materials which e been cast into thin layers, and interspersed with metal electrodes mately exposed on opposite edges of the laminated structure. The re structure is fired at high temperature to produce a monolithic ck, which provides high capacitance values in a small physical ume. After firing, conductive terminations are applied to opposite s of the chip to make contact with the exposed electrodes.

KEMET leaded ceramic capacitors are offered in the three most popular temperature characteristics: **C0G:** Class 1, with a temperature coefficient of 0 ± 30ppm per degree C over an operating temperature range of -55°C to +125°C (Also known as "NP0"). **X7R:** Class II, with a maximum capacitance change of ±15% over an operating temperature range of -55°C to +125°C. **Z5U:** Class III, with a maximum capacitance change of +22% - 56% over an operating temperature range of +10°C to +85°C.

anasonic® Multilayer Ceramic Chip Capacitors

0201, 0402, 0508, 0603, 0612, 0805, 1206, 1210 and 1812

URES:
ll in size and wide capacitance range
erior humidity characteristic and long life due to the monolithic
tructure
llent solderability and resistance to soldering heat due to
inals with three layers of silver nickel and solder
self-inductance and excellent frequency characteristic

RECOMMENDED APPLICATIONS:

Class 1 (T.C. Type): Temperature compensations, tuned circuits and filter circuits, where low loss and high stability of capacitance and high insulation resistance are required.

Class 2 (HI-K type): Coupling and By-pass, where low loss and high stability of capacitance are not so important.

AVX Multilayer Ceramic Chip Capacitors

(NP0) Dielectric: • EIA Class I ceramic materials • C0G (NP0) ceramics offer one of the most stable capacitor ectrics available • Capacitance change with temperature is 0 ±30ppm/°C which is less than ±0.3% Δ C from -55°C ~ °C • Operating temperature range: -55°C ~ 125°C

Dielectric: • X7R formulations are called "temperature stable" ceramics and fall into EIA Class II materials • Its perature variation of capacitance is within ±15% from -55°C ~ 125°C • Operating temperature range: -55°C ~ 125°C

Dielectric: • General purpose dielectric for ceramic capacitors • EIA Class II dielectric • Temperature variation of acitance is within ±15% from -55°C ~ 85°C • Operating temperature range: -55°C ~ 85°C

Dielectric: • Y5V formulations are for general purpose use in a limited temperature range • They have a wide perature characteristic of +22%-82% capacitance change over the operating temperature range of -30°C ~ 85°C

Low Inductance Capacitors 0612/0508 IDC (InterDigitated Capacitors)

Very low equivalent series inductance, surface mountable, high speed decoupling capacitor. Measured inductances of 120pH (for 0612) and 95 pH (for 0508) are the lowest in the FR4 mountable device family. Opposing current flow creates opposing magnetic fields. This causes the fields to cancel, effectively reducing the equivalent series inductance. Perfect solution for decoupling high speed microprocessors by allowing the engineers to lower the power delivery inductance of the entire system through the use of eight vias. Overall reduction in decoupling components due to very low series inductance and high capacitance.

Characteristics:

• Temperature Coefficient: ±15% (OVDC) • Dissipation Factor: 4V and 6.3V=6.5% Max., 10V=5.0% Max., 16V=3.5% Max. • Insulation Resistance (@+25°C, RVDC): 100,000MΩ Min., or 1,000MΩ per µF Min., whichever is less • CTE (ppm/C): 12.0 • Thermal Conductivity: 4-5W/M K • Terminations Available: Plated Nickel and Solder • Max. Thickness: 0.037" (0.95mm)

• Operating Temperature: **X7R:** -55°C ~ 125°C, **X5R:** -55°C ~ 85°C

EMET Multilayer Ceramic Chip Capacitors

ET multilayer ceramic chip capacitors are produced in plants designed specifically for chip capacitor facture. The process features a high degree of mechanization as well as precise controls over raw materials and ss conditions. Manufacturing is supplemented by extensive technology, Engineering and Quality Assurance ams. Standard end terminations use a nickel barrier layer and a tin overplate to provide excellent solderability.
